Senario:

You are an unorganized college student at the University of South Carolina. You find yourself forgetting about important and upcoming dates because there are a lot to remember. You want an easy way to make a schedule for yourself.

Task 1:
Look at what work is due on October 29

Task 2:
Create a reminder for your Tabletop club meet on the 29th from 7:00 to 10:00

Task 3:
Change the theme/decoration from pumpkin to flamingo

Notes:

What changes are needed:
I need to use a back arrow because I forgot iPhone users don't already have that on their phone. Also just because it makes it more obvious and so that you don't have to click on the side bar and then the home button

I think I need a help tab just to let people know about all the features available to use.

I can add a button or something to press that will bring you back to the home page

What changes need to be kept the same:
The settings and reminders option.

I'm keeping the themes; people enjoy customization

Opening with the calendar as the home page; it's a good visual
